TOWER PRODUCTS TO INTRODUCE NEW ANILOX AND PLATE CLEANING TECHNOLOGIES AT INFO-FLEX 2017

(Easton/Palmer Township PA) Tower Products, Inc., the leading manufacturer of environmentally sensitive pressroom chemistry for the offset and flexographic printing industry, is introducing its newest anilox and plate cleaning technologies at InfoFlex 2017, May1-2 in Phoenix, AZ. Tower Products will be exhibiting in Booth #905.

SmartFlex High Tech Anilox Cleaner is an outstanding new technology that cleans anilox rollers in hot tank or ultrasonic applications. The product quickly and effectively cleans the cells of dried ink and prevents re-depositing back on the roller. With its advanced non VOC formula, this water based cleaning technology is safe on rollers and great for regulatory compliance.

SmartFlex UV Flexo Cleaner provides outstanding cleaning power to clean flexographic printing plates both manually and in automatic plate cleaning machines. The advanced formula has a very high flashpoint and no HAP's (hazardous air pollutants) and is easy to use with a mild odor.

The Tower exhibit will be staffed with knowledgeable technical representatives to explain these products along with the full line of Tower's flexographic pressroom chemical offerings.

For more information, please contact Tower Products at 800.527.8626 or email us at info@towerproducts.com or visit our website at www.towerflexo.com.
