HOW TO USE SUPERWASH STEP ONE AND STEP TWO

Two-step color washes are still in use in many sheetfed and small web shops. The purpose of using a two-step wash is to be able to change ink colors that are drastic contrasts (black to yellow) as quickly as possible.

Tower Superwash Step One and Step Two offer the printer the following advantages over competitive washes:

1. Advanced technology formula.
2. Viscous emulsion for uniform flow down the roller train.
3. A Step Two that completely extracts the first step to prevent surfactant buildup in the rollers.

HOW TO DEMONSTRATE SUPERWASH STEP ONE AND STEP TWO

Wash up the rollers using your current two-step product. Then, apply Superwash Step One and Step Two as directed. Just watch how much more ink our Superwash System pulls out of those "clean" rollers.
