TOWER PRODUCTS ADVANCED FOUNTAIN SOLUTION TECHNOLOGY FOR LED UV PRINTING

(Easton, PA) Tower Products, Inc., a leading manufacturer of environmentally sensitive pressroom chemistry offers *MILLENNIUM 7000*, a zero VOC fountain solution for use on high speed sheet-fed presses; and specifically for printers that are using LED UV inks. The product is yet another Tower solution helping printers to comply with complex environmental issues in the greening of their pressroom.

MILLENNIUM 7000, when used in conjunction with the Tower's *AR-7500* (a high technology alcohol substitute that does not contain any HAPS or ethylene glycol ethers) gives sheet-fed press operators increased latitude on press at maximum production speeds. The product features an outstanding buffering system to prevent calcium carbonate from causing a pH drift and has the ability to give the pressman a much faster and cleaner roll up, preventing excess paper waste. When used in the LED UV process, the solution does not interfere with drying and is the product of choice for printing on plastic and non-porous substrates.

MILLENNIUM 7000 and AR-7500, as well as, other Tower brand pressroom chemical products are only available through authorized Tower dealers. For more information, please contact Sue McGraw at 800.527.8626 or visit our website at www.towerproducts.com.
